Material Design is a design language developed in 2014 by Google and is very popular for web and mobile applications.

The Material UI React library is designed from the ground up to be fast, small, and developer-friendly. Using the Material UI React library you can add Material UI components to your React apps and switch seamlessly between MUI CSS/JS and MUI React even within the same app.

With the components from the Material-UI library, it's very easy to make use of Material Design elements in your React web or mobile application. The library's website can be found at <https://material-ui.com>

Installation

Install Material-UI's source files via npm. We take care of injecting the CSS needed.

```
Code
$ npm install @material-ui/core
```

or use a CDN. Load the default Roboto font.

```
Code
<link rel="stylesheet" href="https://fonts.googleapis.com/css?family=Roboto:300,400,500,
```

Usage

Material-UI components work without any additional setup and don't pollute the global scope.

```
Code
```

}

Now, Here is the actual source code of the TODO List App in React using Material UI, and please subscribe to my channel Here for daily awesome programming videos for free.

Earlier this year, Apple released its list of top iPhone apps at the one billion download Kajabi vs clickfunnels. It's a very interesting list and there are a lot of good lessons to be learned from it and a lot of money to be made, if you can get it right. How to get access to this giant cash cow? Here are some tips, based on our analysis of Apple's twenty top paid apps
